ENVIRONMENTAL POLICY

Nexans Hellas is a cable manufacturing company and as a member of Nexans Group implements and maintains the high level of environment's protection as set by the Group.

Aiming at the best and most effective environmental protection, Nexans Hellas

- has developed and implemented an Environmental Management System (EMS) which covers all company's activities
- maintains and continuously improves its EMS,
- has identified the environmental aspects of its activities, products and services,
- has set the environmental objectives and targets,
- reviews the environmental objectives and targets,

The performance of the EMS is evaluated and if needed all the necessary actions are taken in order to secure the continues improvement of EMS.

The company's management undertakes the responsibility of complying with the legal and other requirements, as agreed in written, and are relevant to the environmental aspects of the company. The company also undertakes the responsibility of complying with the requirements that the Group has agreed in written on a global level, like the UN Global Compact.

The company's management is committed to implement every possible action in order to prevent any kind of environmental pollution due to the company's activities. For this reason, preventive measures of pollution have been undertaken, whereas emergency plans have been developed and implemented, so as to minimize the environmental consequences in case of accidents. These preventive measures of pollution are assessed by Nexans Group thus providing the EHP (Environment High Protected) label.

The company's management considers that the human factor is critical for the environment's protection. For this reason, the company's personnel is being informed and trained for the importance of the environment's protection and the relevant measures undertaken, as set by the company's management. In addition, the company also informs the personnel of any third party that works on behalf of the company.

In the framework of implementing the environmental policy and the EMS, the company's management has the necessary resources for the environment's protection. The appropriateness and adequacy of resources is being reviewed aiming at the continuous improvement of the environmental performance of the company.

The company's products design takes into consideration the environmental impact. Every possible effort is being undertaken, so that the raw materials used in the production are recyclable after the products life cycle ends.
